Corrections applicable to first printing

Chapter 3

Section 3.3.3

- page 103. In the box plot "Distribution of age," the blue curly bracket indicating the IQR should extend from the upper quartile to the lower quartile instead of from the median to the lower quartile. In addition, the blue curly bracket indicating $1.5 \times$ IQR should extend from the upper quartile instead of from the median.

Distribution of age

Section 3.6.2

- page 120-121. 0 and 1 should be flipped when describing the Gini coefficient in both text and text box. Text should read "In a perfectly equal society, the Gini coefficient is 0. In contrast, a society where

one person possesses all the wealth has a Gini coefficient of 1." Text box should read "It ranges from 0 (everyone has the same amount of wealth) to 1 (one person possesses all the wealth)."
